

OXY[®] SPY[®] Oxygen Analyser

OXY[®] SPY[®] is a new, ergonomically designed Oxygen Analyser, especially suitable for technical diving. It has some unique features like automatic calibration (button operated), automatic calibration gas detection (air or pure oxygen), MOD display for the selected units (m/ft) / oxygen partial pressure and the possibility to "freeze" the display.

Features:

- *single button operation*
- *right and left hand operation*
- *dual flow direction function*
- *water resistant*
- *calibration gas detection (air or pure oxygen)*
- *button operated calibration*
- *display hold mode*
- *adjustable oxygen partial pressure*
- *depth unit imperial or metric*
- *MOD display for the adjusted oxygen partial pressure*
- *automatic power off*
- *low battery warning*
- *low oxygen sensor warning*
- *easily exchangeable oxygen sensor*
- *exchangeable Lithium battery (CR2430)*
- *battery lifetime 3 years minimum*
- *Oxygen sensor lifetime approx. 2 years*
- *resolution 0.1% O₂*
- *measurement range 0.1 ... 100.0% O₂*
- *temperature range 0...50°C (32...122°F)*

OXY[®] SPY[®] is designed by the Swiss company Dynatron AG. Dynatron's engineers also developed the electronics and the software of the Aladin diving computers, which belong to the leading diving instruments since 1987.

OXY[®] SPY[®] offers you comfort and reliability in analysing your breathing gas. Due to its unique, ergonomic design, it is the perfect "personal" analyser for trained and certified Nitrox divers.

Development and production of the swiss made **OXY[®] SPY[®]** meet a very high quality standard. Therefore, a limited warranty for defects is given for a period of 2 years (oxygen sensor and battery excluded).
